

Cerva Cortina MF S3 SRC ankle

DESCRIPTION

Modern safety ankle shoes with a composite anti-puncture midsole and a composite toe cap that protects against compression with a force of up to 15 kN or a load weighing up to 20 kg falling from a height of 1 m. The anti-static and anti-slip, oil-resistant sole is made of double-density polyurethane and ensures maximum certainty at every step. The upper part of the shoe is made of high-quality full-grain leather with waterproof properties and the inner lining is made of breathable polyester. A special Cordura material was used on the padding around the ankle, has a high resistance to tearing. Another benefit of the Cortina model is the unique "slim" design, which is especially suitable for narrow feet. These shoes look like sports shoes, but they protect your feet perfectly.
